

Better Managed Backup and Vaulting Services

Your data is too valuable to lose. One industry survey indicates that more than 80% of all companies operate with some disaster recovery plan, while the rest forge ahead without any plan at all. Those that do have a plan however, may be unknowingly under-protected. Do you know for sure that your business is well prepared for a disaster?

Consider these statistics: Forty percent of all companies that experience a major disaster will go out of business if they cannot gain access to their data within twenty-four hours (Gartner). Every year one in five hundred businesses will experience a severe disaster (McGladrey and Pullen)

Knowing you need to minimize the risk of unplanned downtime; you can rely on BCI with 20+ years of expertise to help you do just that.

Benefits

- Flexible and Scalable Data Backup Protection
- File, Web, Application, Database, and Operating Systems Support
- Reliable All-In-One Solution
- Affordable Fixed Monthly Rates

Our services were designed knowing that the best answer to rapid recovery is an on-premise appliance that can quickly serve to back up your information technology infrastructure locally and act as a gateway point to a remote vaulting location.

Security and privacy for both at-rest and in-flight data is important and must be taken into account. Different industries have different requirements, so it is important that security and privacy be addressed in a flexible manner. We provide in-flight and at-rest data security via encryption technology. Knowing that encryption can have a tremendous impact on data backup, we also provide the flexibility to employ it where you need it and not employ it where you don't.

Features

- Scalable from 1TB to Hundreds of Terabytes
- Minimal Capital Expense and Competitive Monthly Rates
- Customized Backup and Retention Schedule
- No Additional per Server or Database Licensing Costs
- Support for Hundreds of Operating Systems, Applications and Databases
- 24/7/365 Management and Monitoring
- BareMetal™ Restoration of Entire Failed Servers
- Disk-to-Disk Data Protection
- Point-In-Time Backup
- Support for Virtual Platforms
- Offsite Vaulting, with Deduplication and Compression
